Why JUnit needs your support

With 43 million downloads from Maven Central in 2014 **JUnit** still is the default testing library for Java. Millions of projects rely on it being both stable and allowing to test the latest features of the latest JDK. Moreover, many other testing libraries hook into JUnit as a way to enable IDE and build tool integration. Keeping JUnit in shape is a major task for those maintaining and evolving the library.

As of today, none of the active JUnit maintainers are paid by their employer to do this work. Not surprisingly many unresolved issues have piled up and, what's worse, not all of them are being addressed. This is a problem because it means that the library is not being maintained and the features in Java 8 and Java 9 are not being tested properly.

ESTIMATED JUNE 2016

The background of the slide is a piece of marbled paper with a complex, swirling pattern of colors including shades of yellow, orange, brown, and teal. A white rectangular box is positioned in the upper-left quadrant, containing the title and three paragraphs of text.

## About

*JUnit 5* is the next generation of JUnit. The goal is to create an up-to-date foundation for developer-side testing on the JVM. This includes focusing on Java 8 and above, as well as enabling many different styles of testing.

JUnit 5 is the result of [JUnit Lambda](#) and its [crowdfunding campaign on Indiegogo](#).

The JUnit 5 team released [Milestone 4](#) on April 1, 2017, and is currently working on additional milestones and ultimately a GA release (see [Roadmap](#) for details).

The background of the entire page is a piece of marbled paper with a complex, swirling pattern of colors including greens, browns, purples, and oranges. The pattern resembles natural stone or liquid swirls.

## Phase 5: Additional Milestones

---

The JUnit team plans to release additional [milestones](#) in 2016 and 2017.

## Phase 6: Release Candidates

---

Once the JUnit team and community are satisfied with the stability and core feature set of released milestones, the JUnit team plans to publish one or more release candidates (e.g., RC1, RC2, etc.) before a final GA release.

## Phase 7: GA Release

---

Depending on time constraints, resources, and community feedback, the JUnit team plans to release JUnit 5.0 GA during Q3 2017.

# Во славу Юпитера

*Десять свежих снимков российских астрофотографов*

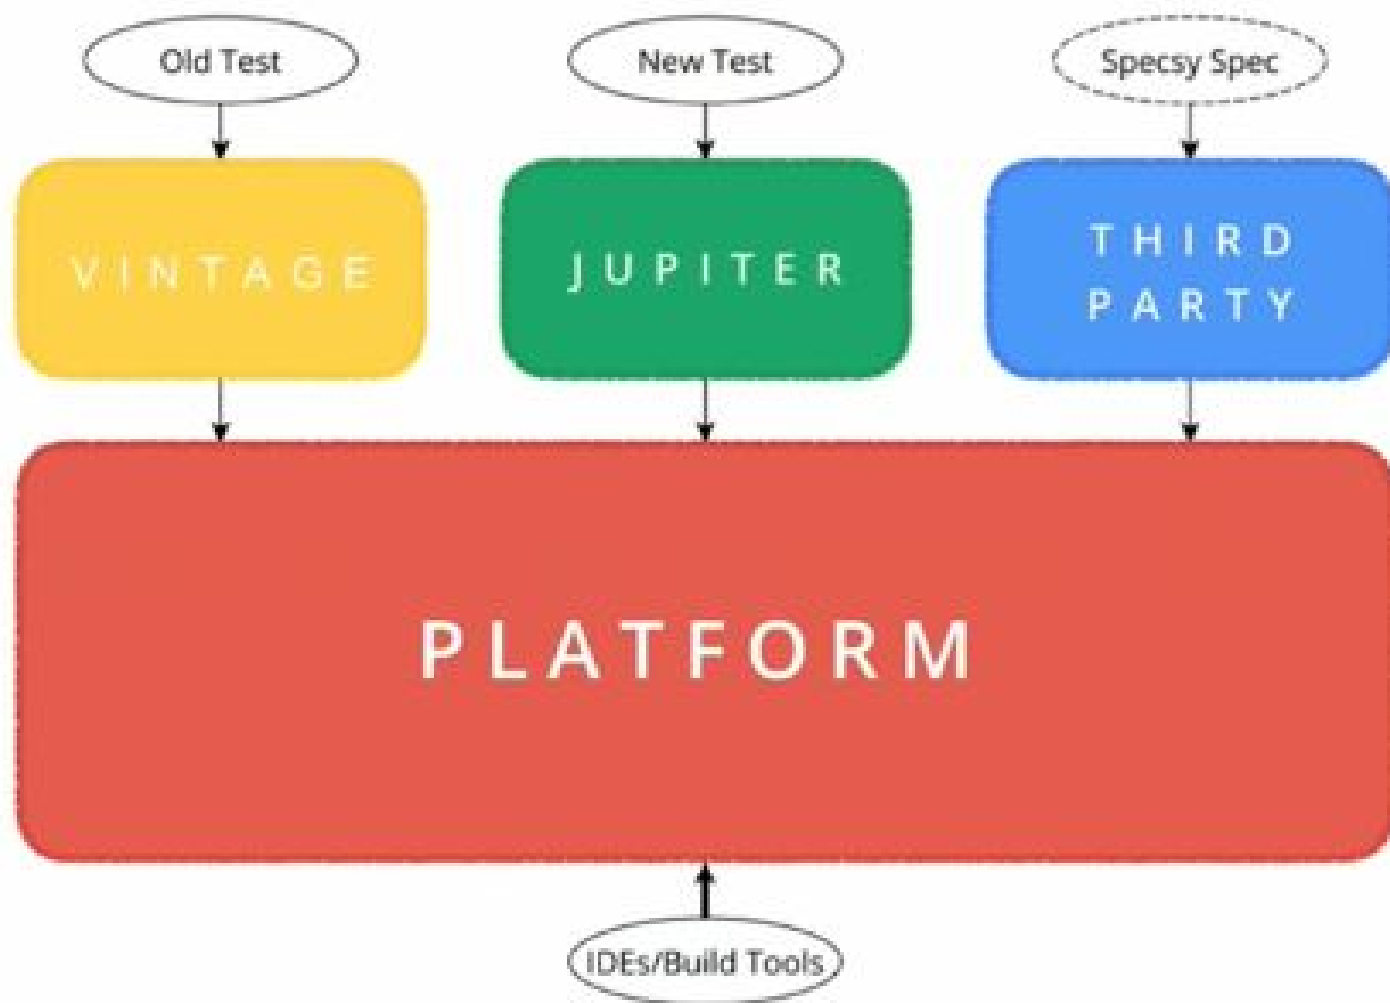

Наступил один из самых удачных моментов для наблюдений Юпитера. Седьмого апреля планета достигла точки противостояния с Солнцем, а значит, расстояние от нее до Земли минимально — ближе к нам в этом году Юпитер уже не окажется. Это прекрасный повод вооружиться телескопом, мощным биноклем или даже фотоаппаратом с телеобъективом и приступить к поискам газового гиганта. А
